

Product datasheet for **SC330996**

CIB2 (NM_001271889) Human Untagged Clone

Product data:

Product Type: Expression Plasmids
Product Name: CIB2 (NM_001271889) Human Untagged Clone
Tag: Tag Free
Symbol: CIB2
Synonyms: DFNB48; KIP2; USH1J
Vector: pCMV6-Entry (PS100001)
Fully Sequenced ORF: >SC330996 representing NM_001271889.
Blue=Insert sequence Red=Cloning site Green=Tag(s)

Restriction Sites: Sgfl-Mlul
ACCN: NM_001271889
Insert Size: 417 bp
OTI Disclaimer: Our molecular clone sequence data has been matched to the reference identifier above as a point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative RNA splicing form or single nucleotide polymorphism (SNP).
Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

[View online »](#)

Reconstitution Method:

1. Centrifuge at 5,000xg for 5min.
2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.
5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

RefSeq: [NM_001271889.1](#)

RefSeq Size: 1476 bp

RefSeq ORF: 417 bp

Locus ID: 10518

UniProt ID: [O75838](#)

Cytogenetics: 15q25.1

Protein Families: Druggable Genome

MW: 15.8 kDa

Gene Summary: The protein encoded by this gene is similar to that of KIP/CIB, calcineurin B, and calmodulin. The encoded protein is a calcium-binding regulatory protein that interacts with DNA-dependent protein kinase catalytic subunits (DNA-PKcs), and it is involved in photoreceptor cell maintenance. Mutations in this gene cause deafness, autosomal recessive, 48 (DFNB48), and also Usher syndrome 1J (USH1J). Alternative splicing results in multiple transcript variants. [provided by RefSeq, Jul 2014]
Transcript Variant: This variant (3) lacks two alternate exons resulting in the loss of an in-frame segment in the 5' coding region, compared to variant 1. The encoded isoform (3) is shorter than isoform 1.
