

Product datasheet for **SC332106**

STEAP2 (NM_001244945) Human Untagged Clone

Product data:

Product Type: Expression Plasmids
Product Name: STEAP2 (NM_001244945) Human Untagged Clone
Tag: Tag Free
Symbol: STEAP2
Synonyms: IPCA1; PCANAP1; PUMPCn; STAMP1; STMP
Vector: pCMV6-Entry (PS100001)
Fully Sequenced ORF: >SC332106 representing NM_001244945.
 Blue=Insert sequence Red=Cloning site Green=Tag(s)

OTI Disclaimer:	Our molecular clone sequence data has been matched to the reference identifier above as a point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative RNA splicing form or single nucleotide polymorphism (SNP).
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method:	<ol style="list-style-type: none">1. Centrifuge at 5,000xg for 5min.2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.3. Close the tube and incubate for 10 minutes at room temperature.4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	NM_001244945.1
RefSeq Size:	2514 bp
RefSeq ORF:	1365 bp
Locus ID:	261729
Cytogenetics:	7q21.13
Protein Families:	Transmembrane
MW:	52.1 kDa
Gene Summary:	<p>This gene is a member of the STEAP family and encodes a multi-pass membrane protein that localizes to the Golgi complex, the plasma membrane, and the vesicular tubular structures in the cytosol. A highly similar protein in mouse has both ferrireductase and cupric reductase activity, and stimulates the cellular uptake of both iron and copper in vitro. Increased transcriptional expression of the human gene is associated with prostate cancer progression. Alternate transcriptional splice variants, encoding different isoforms, have been characterized. [provided by RefSeq, Jul 2008]</p> <p>Transcript Variant: This variant (5) differs in the 3' UTR, and 3' coding region compared to variant 1, resulting in a protein (isoform b) that is shorter and has a unique C-terminus, compared to isoform a. Sequence Note: The RefSeq transcript and protein were derived from genomic sequence to make the sequence consistent with the reference genome assembly. The genomic coordinates used for the transcript record were based on alignments.</p>
