

Product datasheet for **SC332719**

FBH1 (NM_001258452) Human Untagged Clone

Product data:

Product Type:	Expression Plasmids
Product Name:	FBH1 (NM_001258452) Human Untagged Clone
Tag:	Tag Free
Symbol:	FBH1
Synonyms:	Fbx18; FBXO18; hFBH1
Vector:	pCMV6-Entry (PS100001)

[View online »](#)

Fully Sequenced ORF: >SC332719 representing NM_001258452.

Restriction Sites: SgfI-RsrII
ACC�: NM_001258452
Insert Size: 2961 bp

OTI Disclaimer:	Our molecular clone sequence data has been matched to the reference identifier above as a point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative RNA splicing form or single nucleotide polymorphism (SNP).
Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method:	1. Centrifuge at 5,000xg for 5min. 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA. 3. Close the tube and incubate for 10 minutes at room temperature. 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom. 5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	NM_001258452.1
RefSeq Size:	3681 bp
RefSeq ORF:	2961 bp
Locus ID:	84893
UniProt ID:	Q8NFZ0
Cytogenetics:	10p15.1
Protein Families:	Druggable Genome
MW:	110.9 kDa
Gene Summary:	This gene encodes a member of the F-box protein family, members of which are characterized by an approximately 40 amino acid motif, the F-box. The F-box proteins constitute one of the four subunits of ubiquitin protein ligase complex called SCFs (SKP1-cullin-F-box), which function in phosphorylation-dependent ubiquitination. The F-box proteins are divided into three classes: Fbws containing WD-40 domains, Fbls containing leucine-rich repeats, and Fbxs containing either different protein-protein interaction modules or no recognizable motifs. The protein encoded by this gene belongs to the Fbx class. It contains an F-box motif and seven conserved helicase motifs, and has both DNA-dependent ATPase and DNA unwinding activities. Alternatively spliced transcript variants encoding distinct isoforms have been identified for this gene. [provided by RefSeq, Jul 2008] Transcript Variant: This variant (3) differs at the 5' end and contains an additional in-frame coding exon compared to variant 1, which results in translation initiation from an in-frame downstream AUG, and a shorter isoform (3) with an internal protein segment not found in isoform 1.
