

Product datasheet for **SC332964**

DRIP130 (MED23) (NM_001270521) Human Untagged Clone

Product data:

Product Type: Expression Plasmids
Product Name: DRIP130 (MED23) (NM_001270521) Human Untagged Clone
Tag: Tag Free
Symbol: DRIP130
Synonyms: ARC130; CRSP3; CRSP130; CRSP133; DRIP130; MRT18; SUR-2; SUR2
Vector: pCMV6-Entry (PS100001)
Fully Sequenced ORF: >SC332964 representing NM_001270521.
 Blue=Insert sequence Red=Cloning site Green=Tag(s)

- Restriction Sites:** SgfI-MluI
- ACCN:** NM_001270521
- Insert Size:** 4080 bp
- OTI Disclaimer:** Our molecular clone sequence data has been matched to the reference identifier above as a point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative RNA splicing form or single nucleotide polymorphism (SNP).
- Components:** The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method:

1. Centrifuge at 5,000xg for 5min.
2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.
3. Close the tube and incubate for 10 minutes at room temperature.
4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.
5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

RefSeq: [NM_001270521.1](#)

RefSeq Size: 4612 bp

RefSeq ORF: 4080 bp

Locus ID: 9439

UniProt ID: [Q9ULK4](#)

Cytogenetics: 6q23.2

Protein Families: Druggable Genome, Transcription Factors

MW: 155.6 kDa

Gene Summary: The activation of gene transcription is a multistep process that is triggered by factors that recognize transcriptional enhancer sites in DNA. These factors work with co-activators to direct transcriptional initiation by the RNA polymerase II apparatus. The protein encoded by this gene is a subunit of the CRSP (cofactor required for SP1 activation) complex, which, along with TFIID, is required for efficient activation by SP1. This protein is also a component of other multisubunit complexes e.g. thyroid hormone receptor-(TR-) associated proteins which interact with TR and facilitate TR function on DNA templates in conjunction with initiation factors and cofactors. This protein also acts as a metastasis suppressor. Several alternatively spliced transcript variants encoding different isoforms have been described for this gene. [provided by RefSeq, Jul 2012]

Transcript Variant: This variant (3) uses an alternate splice junction in the 3' end compared to variant 1. The resulting isoform (c) has a shorter and distinct C-terminus compared to isoform a.
