

Product datasheet for SC333855

Product datasneet for 3C333633

PPCS (NM_001287508) Human Untagged Clone

Product data:

Product Type: Expression Plasmids

Product Name: PPCS (NM_001287508) Human Untagged Clone

Tag: Tag Free
Symbol: PPCS
Synonyms: CMD2C

Vector: pCMV6-Entry (PS100001)

Fully Sequenced ORF: >SC333855 representing NM_001287508.

Blue=Insert sequence Red=Cloning site Green=Tag(s)

TGA

Restriction Sites: Sgfl-Mlul

ACCN: NM_001287508

Insert Size: 417 bp

OTI Disclaimer: Our molecular clone sequence data has been matched to the reference identifier above as a

point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative

RNA splicing form or single nucleotide polymorphism (SNP).

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

OriGene Technologies, Inc. 9620 Medical Center Drive, Ste 200

Rockville, MD 20850, US Phone: +1-888-267-4436 https://www.origene.com techsupport@origene.com EU: info-de@origene.com

Reconstitution Method:

- 1. Centrifuge at 5,000xg for 5min.
- 2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.
- 3. Close the tube and incubate for 10 minutes at room temperature.
- 4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.

RefSeq: NM 001287508.1

RefSeq Size: 1963 bp
RefSeq ORF: 417 bp
Locus ID: 79717
UniProt ID: Q9HAB8
Cytogenetics: 1p34.2

Protein Pathways: Metabolic pathways, Pantothenate and CoA biosynthesis

MW: 15.6 kDa

Gene Summary: Biosynthesis of coenzyme A (CoA) from pantothenic acid (vitamin B5) is an essential universal

pathway in prokaryotes and eukaryotes. PPCS (EC 6.3.2.5), one of the last enzymes in this pathway, converts phosphopantothenate to phosphopantothenoylcysteine (Daugherty et al.,

2002 [PubMed 11923312]).[supplied by OMIM, Mar 2008]

Transcript Variant: This variant (5) uses an alternate splice junction at the 3' end of the first exon compared to variant 1. The resulting isoform (b) is shorter at the N-terminus compared to isoform a. Variants 2, 3, 5, 6, and 7 all encode the same isoform (b). Sequence Note: This RefSeq record was created from transcript and genomic sequence data to make the sequence consistent with the reference genome assembly. The genomic coordinates used for the

transcript record were based on transcript alignments.
