OTI Disclaimer: Our molecular clone sequence data has been matched to the reference identifier above as a

RNA splicing form or single nucleotide polymorphism (SNP).

RNF36 (TRIM69) (NM_001301146) Human Untagged Clone - SC334912

Components: The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube

containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).

Reconstitution Method: 1. Centrifuge at 5,000xg for 5min.

2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.

3. Close the tube and incubate for 10 minutes at room temperature.

4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid

at the bottom.

5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of

shipping when stored at -20°C.

Protein Families: Druggable Genome

Gene Summary: This gene encodes a member of the RING-B-box-coiled-coil (RBCC) family and encodes a

protein with an N-terminal RING finger motif, a PRY domain and a C-terminal SPRY domain. The mouse ortholog of this gene is specifically expressed in germ cells at the round spermatid stages during spermatogenesis and, when overexpressed, induces apoptosis. Alternatively spliced transcript variants encoding distinct isoforms have been described. [provided by

RefSeq, Jul 2008]

Transcript Variant: This variant (e) lacks an alternate in-frame exon in both the 5' and central coding regions, compared to variant a, resulting in an isoform (e) that is shorter than isoform

a.
