

Product datasheet for **SC337524**

ADAM29 (NM_001278126) Human Untagged Clone

Product data:

Product Type:	Expression Plasmids
Product Name:	ADAM29 (NM_001278126) Human Untagged Clone
Tag:	Tag Free
Symbol:	ADAM29
Synonyms:	CT73; svph1
Vector:	<u>pCMV6 series</u>

[View online »](#)

Fully Sequenced ORF: >NCBI ORF sequence for NM_001278126, the custom clone sequence may differ by one or more nucleotides

Restriction Sites: SgfI-MluI

ACCN: NM_001278126

OTI Disclaimer: Our molecular clone sequence data has been matched to the reference identifier above as a point of reference. Note that the complete sequence of our molecular clones may differ from the sequence published for this corresponding reference, e.g., by representing an alternative RNA splicing form or single nucleotide polymorphism (SNP).

Components:	The ORF clone is ion-exchange column purified and shipped in a 2D barcoded Matrix tube containing 10ug of transfection-ready, dried plasmid DNA (reconstitute with 100 ul of water).
Reconstitution Method:	<ol style="list-style-type: none">1. Centrifuge at 5,000xg for 5min.2. Carefully open the tube and add 100ul of sterile water to dissolve the DNA.3. Close the tube and incubate for 10 minutes at room temperature.4. Briefly vortex the tube and then do a quick spin (less than 5000xg) to concentrate the liquid at the bottom.5. Store the suspended plasmid at -20°C. The DNA is stable for at least one year from date of shipping when stored at -20°C.
RefSeq:	<u>NM_001278126.1, NP_001265055.1</u>
RefSeq Size:	3379 bp
RefSeq ORF:	2463 bp
Locus ID:	11086
UniProt ID:	<u>Q9UKF5</u>
Cytogenetics:	4q34.1
Protein Families:	Druggable Genome, Transmembrane
Gene Summary:	<p>This gene encodes a member of the ADAM (a disintegrin and metalloprotease domain) family. Members of this family are membrane-anchored proteins structurally related to snake venom disintegrins, and have been implicated in a variety of biological processes involving cell-cell and cell-matrix interactions, including fertilization, muscle development, and neurogenesis. The protein encoded by this gene is highly expressed in testis and may be involved in human spermatogenesis. Alternative splicing results in multiple transcript variants that encode the same protein. [provided by RefSeq, Jul 2008]</p> <p>Transcript Variant: This variant (6) differs in the 5' UTR, compared to variant 1. Variants 1, 2, 3, 4, 5, 6, and 7 encode the same protein.</p>
