

## Product datasheet for **SM067A**

### CD161 (KLRB1) Mouse Monoclonal Antibody [Clone ID: PK136]

#### Product data:

Product Type:	Primary Antibodies
Clone Name:	PK136
Applications:	FC, FN, WB
Recommended Dilution:	<b>Flow Cytometry:</b> Use 10 µl of 5-10 µg/ml diluted antibody to label 1x10 <sup>6</sup> cells in 100 µl. <b>Complement dependent lysis:</b> 1-10 µg/ml (See Ref. 4). <b>In Vivo depletion of NK cells</b> (See Ref. 4). <b>Immunoprecipitation.</b>
Reactivity:	Mouse
Host:	Mouse
Isotype:	IgG2a
Clonality:	Monoclonal
Immunogen:	Spleen and bone marrow cells from CE mice
Specificity:	SM067A (Clone PK136) recognises the Mouse NK1.1 cell surface antigen also known as CD161. Although previously thought to recognise only CD161c, recent data has shown that the PK136 antibody may also react with CD161b. CD161c expression itself is strain specific in mice, but recognition of CD161b by PK136 appears to be even more complex, as only some CD161b positive strains are labelled by the antibody. Engagement of CD161c has been reported to have activating function in NK cells, whilst engagement of CD161b is inhibitory. PK136 is useful for the identification of NK cells in selected strains of mice (positive on C57BL, FVB/N and NZB, but negative on AKR and BALB/c) and is also expressed by rare subsets of T cells and monocytes. The antibody has also been used for in vivo depletion of NK cells and In Vitro activation of NK cells.
Formulation:	PBS, pH 7.4, without preservatives State: Azide Free State: Liquid purified IgG fraction
Concentration:	lot specific
Purification:	Affinity Chromatography on Protein A
Conjugation:	Unconjugated

Storage:	Store the antibody -20°C. Avoid repeated freezing and thawing.
Stability:	Shelf life: one year from despatch.
Gene Name:	killer cell lectin like receptor B1
Database Link:	<a href="#">Entrez Gene 3820 Human Q12918</a>
Background:	NK1.1 is a cell surface glycoprotein encoded by members of the NKR-P1 gene family. In the mouse the NKR-P1 family has three members, NKR-P1A, -B and -C, whilst in the human only one member has been identified. The human protein has received the designation CD161, and the mouse proteins have been referred to as CD161a, -b, -c etc.
Synonyms:	HNKR-P1a, CLEC5B, NKRP1A
Protein Families:	Transmembrane
