Background: CD151 is expressed by epithelial cells, endothelial cells, platelets, megakaryocytes, monocytes

and in the renal glomeruli and proximal and distal tubules. CD151 is not expressed by lymphocytes or granulocytes. More recently CD151 has also been shown to be expressed by

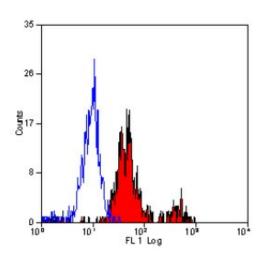

erythrocytes, and to carry the MER2 blood group antigen.

Synonyms: PETA-3, PETA3, GP27, Tetraspanin-24, SFA-1, SFA1

Note: It should be noted that CD151 is very closely associated with the alpha3 beta1 integrin in cells

and co-immunoprecipitation may occur even in quite stringent conditions (ref.1).
