

Product datasheet for **SM1359P**

Cytokeratin 14 (KRT14) Mouse Monoclonal Antibody [Clone ID: LL002]

Product data:

Product Type:	Primary Antibodies
Clone Name:	LL002
Applications:	FC, IF, IHC, WB
Recommended Dilution:	Western Blot. Immunofluorescence. Flow Cytometry: Use 10 µl of 1/100 diluted antibody to label 10 ⁶ cells in 100 µl (Membrane permeabilisation is required). Immunohistochemistry on Frozen Sections. Immunohistochemistry on Paraffin Sections: 1/200. This product requires antigen retrieval using heat treatment prior to staining of paraffin sections. Sodium citrate buffer is recommended for this purpose. Enzyme digestion is not recommended. <i>Recommended Positive Control:</i> Skin, tonsil or squamous cell carcinoma.
Reactivity:	Human
Host:	Mouse
Isotype:	IgG3
Clonality:	Monoclonal
Immunogen:	Last 15 C-terminal residues of Human Cytokeratin 14 conjugated to Thyroglobulin.
Specificity:	This antibody recognises Cytokeratin 14, a type I intermediate filament, expressed by stratifying epithelial cells and can be used to distinguish these cell types from simple epithelial cells, which do not express Cytokeratin 14.
Formulation:	PBS State: Purified State: Liquid purified IgG fraction Preservative: 0.09% Sodium Azide
Concentration:	lot specific
Purification:	Ion Exchange Chromatography
Conjugation:	Unconjugated
Storage:	Store undiluted at 2-8°C for one month or (in aliquots) at -20°C for longer. Avoid repeated freezing and thawing.

Stability: Shelf life: one year from despatch.

Gene Name: keratin 14

Database Link: [Entrez Gene 3861 Human P02533](#)

Background: Cytokeratin is a type I intermediate filament, expressed by stratifying epithelial cells and can be used to distinguish these cell types from simple epithelial cells, which do not express cytokeratin 14. Keratin 14 is a member of the keratin family, the most diverse group of intermediate filaments. It is usually found as a heterotetramer with two molecules of keratin 5, a type II keratin. Together they form the cytoskeleton of epithelial cells. Mutations in the genes for these keratins are associated with epidermolysis bullosa simplex. Keratin 14 has been studied as a prognostic marker in breast cancer.

Synonyms: Cytokeratin-14, CK14, Keratin 14, K14, KRT14
