

Product datasheet for **SM2096HRP**

Rat Lambda light chain Mouse Monoclonal Antibody [Clone ID: MARL-15]

Product data:

Product Type:	Primary Antibodies
Clone Name:	MARL-15
Applications:	ELISA
Recommended Dilution:	ELISA.
Reactivity:	Rat
Host:	Mouse
Isotype:	IgG1
Clonality:	Monoclonal
Immunogen:	Rat lambda light chain. Spleen cells from immunised BALB/c mice were fused with cells of the rat PAI-O myeloma cell line.
Specificity:	This antibody recognises immunoglobulin lambda light chain. This antibody shows no cross-reactivity to Ig heavy chains or to kappa light chain.
Formulation:	PBS, pH7.4 containing 0.01% Thiomersal and 50% Glycerol Label: HRP State: Liquid purified IgG Label: Horseradish Peroxidase
Concentration:	lot specific
Purification:	Affinity chromatography
Conjugation:	HRP
Storage:	Store the antibody undiluted at 2-8°C for one month or (in aliquots) at -20°C for longer. Avoid repeated freezing and thawing.
Stability:	Shelf life: one year from despatch.

Background:

All five immunoglobulin classes share the same basic four polypeptide chain structure of two heavy-chains and two light chains. There are five heavy chain types, and two light-chain types (Kappa and Lambda) both having a molecular weight of 22.5kDa. Any heavy-chain type can associate with either light-chain type, but on any immunoglobulin molecule both light-chains are of the same type. Kappa and Lambda consist of a variable region and a constant region and can easily be differentiated by the antigenic properties of the constant region. The ratio of Kappa to Lambda is 70:30, the vast majority of which is bound to heavy-chain in immunoglobulin. In normal individuals low levels of free light-chain are present in serum (kappa, 1.6-15.2 mg/L; Lambda, 0.4-4.2mg/L), with the occurrence of multiple myeloma or other B-cell malignancies these levels can be greatly elevated and can be found at high levels in the urine (Bence-Jones proteins).
