| | CD41 (ITGA2B) Mouse Monoclonal Antibody [Clone ID: MEM-06] – SM3021R |
|-------------|---|
| Background: | CD41 (platelet glycoprotein IIb) is composed of two subunits (120 kDa a, a and 23 kDa b, b) that interact with CD61 in the presence of calcium to form a functional adhesive protein receptor. Upon blood vessel damage, this receptor binds to a variety of proteins including von Willebrand factor, fibrinogen, fibronectin and vitronectin. CD41 is mainly expressed on megakaryocyte-platelet lineage, but generally belongs to the antigens that are expressed during early stages of hematopoietic differentiation. |
| Synonyms: | Integrin alpha-IIb, GP2B, ITGAB, GPalpha IIb |
