CD55 / DAF Mouse Monoclonal Antibody [Clone ID: MEM-118] – SM3030B

Background:CD55 (decay-accelerating factor, DAF) is a GPI-anchored membrane glycoprotein that
protects autologous cells from classical and alternative pathway of complement cascade.
Bidirectional interactions between CD55 and CD97 are involved in T cell regulation and CD55
can still regulate complement when bound to CD97. In tumours, besides protection agains
complement, CD55 promotes neoangiogenesis, tumorigenesis, invasiveness and evasion of
apoptosis.

Synonyms: CR; CROM; DAF; TC
