TPSAB1 Human siRNA Oligo Duplex (Locus ID 7177)

Product data:

Product Type: siRNA Oligo Duplexes

HPLC purified **Purity:**

Quality Control: Tested by ESI-MS

Available with shipment **Sequences:**

Stability: One year from date of shipment when stored at -20°C.

of transfections: Approximately 330 transfections/2nmol in 24-well plate under optimized conditions (final

conc. 10 nM).

Single siRNA duplex (10nmol) can be ordered. Note:

RefSeq: NM 003294

UniProt ID: Q15661

Synonyms: TPS1; TPS2; TPSB1; TPSB2; Tryptase-2

Components: TPSAB1 (Human) - 3 unique 27mer siRNA duplexes - 2 nmol each (Locus ID 7177)

Included - SR30004, Trilencer-27 Universal Scrambled Negative Control siRNA Duplex - 2 nmol

Included - SR30005, RNAse free siRNA Duplex Resuspension Buffer - 2 ml

Tryptases comprise a family of trypsin-like serine proteases, the peptidase family S1. **Summary:**

Tryptases are enzymatically active only as heparin-stabilized tetramers, and they are resistant

to all known endogenous proteinase inhibitors. Several tryptase genes are clustered on

chromosome 16p13.3. These genes are characterized by several distinct features. They have a

highly conserved 3' UTR and contain tandem repeat sequences at the 5' flank and 3' UTR

which are thought to play a role in regulation of the mRNA stability. These genes have an intron immediately upstream of the initiator Met codon, which separates the site of

transcription initiation from protein coding sequence. This feature is characteristic of

tryptases but is unusual in other genes. The alleles of this gene exhibit an unusual amount of

sequence variation, such that the alleles were once thought to represent two separate genes,

alpha and beta 1. Beta tryptases appear to be the main isoenzymes expressed in mast cells;

whereas in basophils, alpha tryptases predominate. Tryptases have been implicated as

mediators in the pathogenesis of asthma and other allergic and inflammatory disorders.

TPSAB1 Human siRNA Oligo Duplex (Locus ID 7177) - SR304919

Performance Guaranteed:

OriGene guarantees that at least two of the three Dicer-Substrate duplexes in the kit will provide at least 70% or more knockdown of the target mRNA when used at 10 nM concentration by quantitative RT-PCR when the TYE-563 fluorescent transfection control duplex (cat# SR30002) indicates that >90% of the cells have been transfected and the HPRT positive control (cat# SR30003) provides 90% knockdown efficiency.

For non-conforming siRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the siRNA kit. To arrange for a free replacement with newly designed duplexes, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled siRNA control (quantitative RT-PCR data required).
