| Summary:            | This gene encodes a member of the collectin family of C-type lectins that possess collagen-<br>like sequences and carbohydrate recognition domains. Collectins are secreted proteins that<br>play important roles in the innate immune system by binding to carbohydrate antigens on<br>microorganisms, facilitating their recognition and removal. The encoded protein binds to<br>multiple sugars with a preference for fucose and mannose. Mutations in this gene are a<br>cause of 3MC syndrome-2. Alternatively spliced transcript variants encoding multiple<br>isoforms have been observed for this gene. [provided by RefSeq, Dec 2011] |

# COLEC11 Human siRNA Oligo Duplex (Locus ID 78989) - SR312270Performance<br/>Guaranteed:OriGene guarantees that at least two of the three Dicer-Substrate duplexes in the kit will<br/>provide at least 70% or more knockdown of the target mRNA when used at 10 nM<br/>concentration by quantitative RT-PCR when the TYE-563 fluorescent transfection control<br/>duplex (cat# SR30002) indicates that >90% of the cells have been transfected and the HPRT<br/>positive control (cat# SR30003) provides 90% knockdown efficiency.For non-conforming siRNA, requests for replacement product must be made within ninety<br/>(90) days from the date of delivery of the siRNA kit. To arrange for a free replacement with<br/>newly designed duplexes, please contact Technical Services at techsupport@origene.com.<br/>Please provide your data indicating the transfection efficiency and measurement of gene<br/>expression knockdown compared to the scrambled siRNA control (quantitative RT-PCR data

required).
