## Product datasheet for SR315625

## Calpain 12 (CAPN12) Human siRNA Oligo Duplex (Locus ID 147968)

## **Product data:**

PLC purified sted by ESI-MS ailable with shipment ne year from date of shipment when stored at -20°C. oproximately 330 transfections/2nmol in 24-well plate under optimized conditions (final nc. 10 nM). ngle siRNA duplex (10nmol) can be ordered. <u>M 144691</u> <u>5ZSI9</u> NPN12 (Human) - 3 unique 27mer siRNA duplexes - 2 nmol each (Locus ID 147968) PN12 (Human) - 3 unique 27mer siRNA duplexes - 2 nmol each (Locus ID 147968)

e calpains, calcium-activated neutral proteases, are nonlysosomal, intracellular cysteine oteases. The mammalian calpains include ubiquitous, stomach-specific, and muscle- ecific proteins. The ubiquitous enzymes consist of heterodimers with distinct large, catalytic bunits associated with a common small, regulatory subunit. This gene encodes a member the calpain large subunit family. iGene guarantees that at least two of the three Dicer-Substrate duplexes in the kit will ovide at least 70% or more knockdown of the target mRNA when used at 10 nM ncentration by quantitative RT-PCR when the TYE-563 fluorescent transfection control uplex (cat# SR30002) indicates that >90% of the cells have been transfected and the HPRT isitive control (cat# SR30003) provides 90% knockdown efficiency. r non-conforming siRNA, requests for replacement product must be made within ninety 0) days from the date of delivery of the siRNA kit. To arrange for a free replacement with wly designed duplexes, please contact Technical Services at techsupport@origene.com. ease provide your data indicating the transfection efficiency and measurement of gene pression knockdown compared to the scrambled siRNA control (quantitative RT-PCR data
