## Product datasheet for SR320241

## GABA A Receptor beta 3 (GABRB3) Human siRNA Oligo Duplex (Locus ID 2562)

## **Product data:**

| Product Type:       | siRNA Oligo Duplexes  |
|---------------------|---|
| Purity:             | HPLC purified   |
| Quality Control:    | Tested by ESI-MS  |
| Sequences:          | Available with shipment   |
| Stability:          | One year from date of shipment when stored at -20°C.  |
| # of transfections: | Approximately 330 transfections/2nmol in 24-well plate under optimized conditions (final conc. 10 nM).  |
| Note:               | Single siRNA duplex (10nmol) can be ordered.  |
| RefSeq:             | <u>NM 000814, NM 001191320, NM 001191321, NM 001278631, NM 021912, NR 103801</u>  |
| UniProt ID:         | <u>P28472</u>   |
| Synonyms:           | DEE43; ECA5; EIEE43   |
| Components:         | GABRB3 (Human) - 3 unique 27mer siRNA duplexes - 2 nmol each (Locus ID 2562)<br>Included - SR30004, Trilencer-27 Universal Scrambled Negative Control siRNA Duplex - 2 nmol<br>Included - SR30005, RNAse free siRNA Duplex Resuspension Buffer - 2 ml   |
| Summary:            | This gene encodes a member of the ligand-gated ionic channel family. The encoded protein is<br>one the subunits of a multi-subunit chloride channel that serves as the receptor for gamma-<br>aminobutyric acid, a major inhibitory neurotransmitter of the mammalian nervous system.<br>This gene is located on the long arm of chromosome 15 in a cluster with two other genes<br>encoding related subunits of the family. This gene may be associated with the pathogenesis<br>of several disorders including Angelman syndrome, Prader-Willi syndrome, nonsyndromic<br>orofacial clefts, epilepsy and autism. Alternatively spliced transcript variants encoding distinct<br>isoforms have been described. [provided by RefSeq, Jul 2013] |

|                            | GABA A Receptor beta 3 (GABRB3) Human siRNA Oligo Duplex (Locus ID 2562) – SR320241  |
|----------------------------|--|
| Performance<br>Guaranteed: | OriGene guarantees that at least two of the three Dicer-Substrate duplexes in the kit will provide at least 70% or more knockdown of the target mRNA when used at 10 nM concentration by quantitative RT-PCR when the TYE-563 fluorescent transfection control duplex (cat# SR30002) indicates that >90% of the cells have been transfected and the HPRT positive control (cat# SR30003) provides 90% knockdown efficiency.  |
|                            | For non-conforming siRNA, requests for replacement product must be made within ninety<br>(90) days from the date of delivery of the siRNA kit. To arrange for a free replacement with<br>newly designed duplexes, please contact Technical Services at techsupport@origene.com.<br>Please provide your data indicating the transfection efficiency and measurement of gene<br>expression knockdown compared to the scrambled siRNA control (quantitative RT-PCR data |

required).
