| Summary:            | This gene encodes an transmembrane protein that functions as an ATP-dependent<br>transporter of monoamines, such as dopamine, norepinephrine, serotonin, and histamine.<br>This protein transports amine neurotransmitters into synaptic vesicles. Polymorphisms in this<br>gene may be associated with schizophrenia, bipolar disorder, and other<br>neurological/psychiatric ailments. [provided by RefSeq, Jun 2018] |

| Performance<br>Guaranteed: | OriGene guarantees that at least two of the three Dicer-Substrate duplexes in the kit will<br>provide at least 70% or more knockdown of the target mRNA when used at 10 nM<br>concentration by quantitative RT-PCR when the TYE-563 fluorescent transfection control<br>duplex (cat# SR30002) indicates that >90% of the cells have been transfected and the HPRT<br>positive control (cat# SR30003) provides 90% knockdown efficiency. |

For non-conforming siRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the siRNA kit. To arrange for a free replacement with newly designed duplexes, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled siRNA control (quantitative RT-PCR data required).
