| Summary:            | This gene encodes a member of the ubiquitin-specific processing (UBP) family of proteases<br>that is a deubiquitinating enzyme (DUB) with His and Cys domains. This protein is located in<br>the cytoplasm and cleaves the ubiquitin moiety from ubiquitin-fused precursors and<br>ubiquitinylated proteins. The protein specifically deubiquitinates a protein in the Fanconi<br>anemia (FA) DNA repair pathway. Alternate transcriptional splice variants have been<br>characterized. # **ORIGENE**USP1 Human siRNA Oligo Duplex (Locus ID 7398) - SR322165Performance<br/>Guaranteed:OriGene guarantees that at least two of the three Dicer-Substrate duplexes in the kit will<br/>provide at least 70% or more knockdown of the target mRNA when used at 10 nM<br/>concentration by quantitative RT-PCR when the TYE-563 fluorescent transfection control<br/>duplex (cat# SR30002) indicates that >90% of the cells have been transfected and the HPRT<br/>positive control (cat# SR30003) provides 90% knockdown efficiency.For non-conforming siRNA, requests for replacement product must be made within ninety<br/>(90) days from the date of delivery of the siRNA kit. To arrange for a free replacement with<br/>newly designed duplexes, please contact Technical Services at techsupport@origene.com.<br/>Please provide your data indicating the transfection efficiency and measurement of gene<br/>expression knockdown compared to the scrambled siRNA control (quantitative RT-PCR data<br/>required).
