| Summary:            | The protein encoded by this gene belongs to the ubiquitin-specific proteases (UBP) family of<br>enzymes that cleave ubiquitin from ubiquitinated protein substrates. It is highly expressed in<br>liver and thymus, and is localized to the nucleus. This protein efficiently cleaves only ISG15 (a<br>ubiquitin-like protein) fusions, and deletion of this gene in mice results in a massive increase<br>of ISG15 conjugates in tissues, indicating that this protein is a major ISG15-specific protease.<br>Mice lacking this gene are also hypersensitive to interferon, suggesting a function of this<br>protein in downregulating interferon responses, independent of its isopeptidase activity<br>towards ISG15. # **ORIGENEUBP43 (USP18) Human siRNA Oligo Duplex (Locus ID 11274) - SR323398Performance**<br/>**Guaranteed:**OriGene guarantees that at least two of the three Dicer-Substrate duplexes in the kit will<br/>provide at least 70% or more knockdown of the target mRNA when used at 10 nM<br/>concentration by quantitative RT-PCR when the TYE-563 fluorescent transfection control<br/>duplex (cat# SR30002) indicates that >90% of the cells have been transfected and the HPRT<br/>positive control (cat# SR30003) provides 90% knockdown efficiency.For non-conforming siRNA, requests for replacement product must be made within ninety<br/>(90) days from the date of delivery of the siRNA kit. To arrange for a free replacement with<br/>newly designed duplexes, please contact Technical Services at techsupport@origene.com.<br/>Please provide your data indicating the transfection efficiency and measurement of gene<br/>expression knockdown compared to the scrambled siRNA control (quantitative RT-PCR data

required).
