Summary: This gene encodes a secreted member of the phospholipase A2 family, and is found in a

cluster of related family members on chromosome 1. Phospholipase A2 family members

hydrolyze the sn-2 fatty acid ester bond of glycerophospholipids to produce

lysophospholipids and free fatty acid. This gene may be involved in inflammation and

immune response, and in weight loss associated with chronic obstructive pulmonary disease.

Alternative splicing results in multiple transcript variants encoding different isoforms.

Performance Guaranteed:

OriGene guarantees that at least two of the three Dicer-Substrate duplexes in the kit will provide at least 70% or more knockdown of the target mRNA when used at 10 nM concentration by quantitative RT-PCR when the TYE-563 fluorescent transfection control duplex (cat# SR30002) indicates that >90% of the cells have been transfected and the HPRT positive control (cat# SR30003) provides 90% knockdown efficiency.

For non-conforming siRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the siRNA kit. To arrange for a free replacement with newly designed duplexes, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled siRNA control (quantitative RT-PCR data required).
