| Summary:            | May have a pivotal role in cell differentiation of different cell types. May have a specific role in<br>early thymocyte development. Signaling could be triggered by the binding of a lectin-like<br>ligand to the CD24 carbohydrates, and transduced by the release of second messengers<br>derived from the GPI-anchor. Modulates B-cell activation responses (By similarity). In<br>association with SIGLEC10 may be involved in the selective suppression of the immune<br>response to danger-associated molecular patterns (DAMPs) such as HMGB1, HSP70 and<br>HSP90 (PubMed:19264983). Plays a role in the control of autoimmunity (PubMed:20200274).<br>[UniProtKB/Swiss-Prot Function] |

| Performance<br>Guaranteed: | OriGene guarantees that at least two of the three Dicer-Substrate duplexes in the kit will<br>provide at least 70% or more knockdown of the target mRNA when used at 10 nM<br>concentration by quantitative RT-PCR when the TYE-563 fluorescent transfection control<br>duplex (cat# SR30002) indicates that >90% of the cells have been transfected and the HPRT<br>positive control (cat# SR30003) provides 90% knockdown efficiency.  |
|                            | For non-conforming siRNA, requests for replacement product must be made within ninety<br>(90) days from the date of delivery of the siRNA kit. To arrange for a free replacement with<br>newly designed duplexes, please contact Technical Services at techsupport@origene.com.<br>Please provide your data indicating the transfection efficiency and measurement of gene<br>expression knockdown compared to the scrambled siRNA control (quantitative RT-PCR data<br>required). |
