Summary:	This gene encodes a small protein with a conserved DUF343 domain. The human ortholog of this gene expresses two distinct proteins from upstream and downstream coding regions. The upstream CDS encoding a DUF343 domain-containing protein has been conserved at this mouse locus, but the downstream CDS encoding a subunit of an enzyme involved in glycosylphosphatidylinositol biosynthesis has not been conserved. Instead, a separate locus on mouse chromosome 9 encodes the mouse homolog of the human phosphatidylinositol glycan anchor biosynthesis, class Y protein. [provided by RefSeq, Jul 2008]

**Performance  
Guaranteed:**

OriGene guarantees that at least two of the three Dicer-Substrate duplexes in the kit will provide at least 70% or more knockdown of the target mRNA when used at 10 nM concentration by quantitative RT-PCR when the TYE-563 fluorescent transfection control duplex (cat# SR30002) indicates that >90% of the cells have been transfected and the HPRT positive control (cat# SR30003) provides 90% knockdown efficiency.

For non-conforming siRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the siRNA kit. To arrange for a free replacement with newly designed duplexes, please contact Technical Services at [techsupport@origene.com](mailto:techsupport@origene.com). Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled siRNA control (quantitative RT-PCR data required).
