Summary: This gene encodes a homeobox protein that is similar to the Drosophila 'sine oculis' gene

product. This gene is found in a cluster of related genes on chromosome 12 and is thought to be involved in eye development. The encoded transcription factor regulates early progenitor cell proliferation during mammalian retinogenesis and pituitary development. Mice lacking this gene exhibit abnormal development of the suprachiasmatic nucleus and circadian

rhythms. [provided by RefSeq, Sep 2015]

Performance Guaranteed:

OriGene guarantees that at least two of the three Dicer-Substrate duplexes in the kit will provide at least 70% or more knockdown of the target mRNA when used at 10 nM concentration by quantitative RT-PCR when the TYE-563 fluorescent transfection control duplex (cat# SR30002) indicates that >90% of the cells have been transfected and the HPRT positive control (cat# SR30003) provides 90% knockdown efficiency.

For non-conforming siRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the siRNA kit. To arrange for a free replacement with newly designed duplexes, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled siRNA control (quantitative RT-PCR data required).
