| Flouuci uata.       |  |
|---------------------|--|
| Product Type:       | siRNA Oligo Duplexes   |
| Purity:             | HPLC purified  |
| Quality Control:    | Tested by ESI-MS   |
| Sequences:          | Available with shipment  |
| Stability:          | One year from date of shipment when stored at -20°C.   |
| # of transfections: | Approximately 330 transfections/2nmol in 24-well plate under optimized conditions (final conc. 10 nM).   |
| Note:               | Single siRNA duplex (10nmol) can be ordered.   |
| RefSeq:             | <u>NM 172584</u>   |
| UniProt ID:         | <u>Q8BYN3</u>  |
| Synonyms:           | BC031182   |
| Components:         | ltpk1 (Mouse) - 3 unique 27mer siRNA duplexes - 2 nmol each (Locus ID 217837)<br>Included - SR30004, Trilencer-27 Universal Scrambled Negative Control siRNA Duplex - 2 nmol<br>Included - SR30005, RNAse free siRNA Duplex Resuspension Buffer - 2 ml   |
| Summary:            | Kinase that can phosphorylate various inositol polyphosphate such as Ins(3,4,5,6)P4 or<br>Ins(1,3,4)P3. Phosphorylates Ins(3,4,5,6)P4 at position 1 to form Ins(1,3,4,5,6)P5. This reaction<br>is thought to have regulatory importance, since Ins(3,4,5,6)P4 is an inhibitor of plasma<br>membrane Ca(2+)-activated Cl(-) channels, while Ins(1,3,4,5,6)P5 is not. Also phosphorylates<br>Ins(1,3,4)P3 on O-5 and O-6 to form Ins(1,3,4,6)P4, an essential molecule in the<br>hexakisphosphate (InsP6) pathway. Also acts as an inositol polyphosphate phosphatase that<br>dephosphorylate Ins(1,3,4,5)P4 and Ins(1,3,4,6)P4 to Ins(1,3,4)P3, and Ins(1,3,4,5,6)P5 to<br>Ins(3,4,5,6)P4. May also act as an isomerase that interconverts the inositol tetrakisphosphate<br>isomers Ins(1,3,4,5)P4 and Ins(1,3,4,6)P4 in the presence of ADP and magnesium. Probably<br>acts as the rate-limiting enzyme of the InsP6 pathway. Modifies TNF-alpha-induced apoptosis<br>by interfering with the activation of TNFRSF1A-associated death domain (By similarity). Plays<br>an important role in MLKL-mediated necroptosis. Produces highly phosphorylated inositol<br>phosphates such as inositolhexakisphosphate (InsP6) which bind to MLKL mediating the<br>release of an N-terminal auto-inhibitory region leading to its activation. Essential for activated<br>phospho-MLKL to oligomerize and localize to the cell membrane during necroptosis (By<br>similarity).[UniProtKB/Swiss-Prot Function] |

|                            | ltpk1 Mouse siRNA Oligo Duplex (Locus ID 217837) – SR413888  |
|----------------------------|--|
| Performance<br>Guaranteed: | OriGene guarantees that at least two of the three Dicer-Substrate duplexes in the kit will<br>provide at least 70% or more knockdown of the target mRNA when used at 10 nM<br>concentration by quantitative RT-PCR when the TYE-563 fluorescent transfection control<br>duplex (cat# SR30002) indicates that >90% of the cells have been transfected and the HPRT<br>positive control (cat# SR30003) provides 90% knockdown efficiency.  |
|                            | For non-conforming siRNA, requests for replacement product must be made within ninety<br>(90) days from the date of delivery of the siRNA kit. To arrange for a free replacement with<br>newly designed duplexes, please contact Technical Services at techsupport@origene.com.<br>Please provide your data indicating the transfection efficiency and measurement of gene<br>expression knockdown compared to the scrambled siRNA control (quantitative RT-PCR data<br>required). |
