Components: Atp6v0a2 (Mouse) - 3 unique 27mer siRNA duplexes - 2 nmol each (Locus ID 21871)

Included - SR30004, Trilencer-27 Universal Scrambled Negative Control siRNA Duplex - 2 nmol

Included - SR30005, RNAse free siRNA Duplex Resuspension Buffer - 2 ml

Summary: This gene encodes a subunit of vacuolar ATPase, a multimeric enzyme that localizes to

intracellular vesicles and to the plasma membrane of specialized cells. The encoded protein

is a component of the V(0) domain, which functions in proton translocation across

membranes. Function of this gene is important in fetal-specific immune suppression during

pregnancy. [provided by RefSeq, May 2013]

# Performance Guaranteed:

OriGene guarantees that at least two of the three Dicer-Substrate duplexes in the kit will provide at least 70% or more knockdown of the target mRNA when used at 10 nM concentration by quantitative RT-PCR when the TYE-563 fluorescent transfection control duplex (cat# SR30002) indicates that >90% of the cells have been transfected and the HPRT positive control (cat# SR30003) provides 90% knockdown efficiency.

For non-conforming siRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the siRNA kit. To arrange for a free replacement with newly designed duplexes, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled siRNA control (quantitative RT-PCR data required).
