E3 Ubiquitin ligase proteins mediate ubiquitination and subsequent proteasomal **Summary:** 

> degradation of target proteins. E3 ubiquitin ligases accept ubiquitin from an E2 ubiquitinconjugating enzyme in the form of a thioester and then directly transfers the ubiquitin to

targeted substrates. Able to specifically bind RNA.[UniProtKB/Swiss-Prot Function]

OriGene guarantees that at least two of the three Dicer-Substrate duplexes in the kit will **Performance Guaranteed:** 

provide at least 70% or more knockdown of the target mRNA when used at 10 nM

concentration by quantitative RT-PCR when the TYE-563 fluorescent transfection control duplex (cat# SR30002) indicates that >90% of the cells have been transfected and the HPRT

positive control (cat# SR30003) provides 90% knockdown efficiency.

For non-conforming siRNA, requests for replacement product must be made within ninety (90) days from the date of delivery of the siRNA kit. To arrange for a free replacement with newly designed duplexes, please contact Technical Services at techsupport@origene.com. Please provide your data indicating the transfection efficiency and measurement of gene expression knockdown compared to the scrambled siRNA control (quantitative RT-PCR data

required).
