| Summary:            | Component of the COP9 signalosome complex (CSN), a complex involved in various cellular<br>and developmental processes. The CSN complex is an essential regulator of the ubiquitin<br>(Ubl) conjugation pathway by mediating the deneddylation of the cullin subunits of SCF-type<br>E3 ligase complexes, leading to decrease the Ubl ligase activity of SCF-type complexes such as<br>SCF, CSA or DDB2. The complex is also involved in phosphorylation of p53/TP53, c-jun/JUN,<br>IkappaBalpha/NFKBIA, ITPK1 and IRF8/ICSBP, possibly via its association with CK2 and PKD<br>kinases. CSN-dependent phosphorylation of TP53 and JUN promotes and protects<br>degradation by the Ubl system, respectively (By similarity).[UniProtKB/Swiss-Prot Function] |

| Performance<br>Guaranteed: | OriGene guarantees that at least two of the three Dicer-Substrate duplexes in the kit will<br>provide at least 70% or more knockdown of the target mRNA when used at 10 nM<br>concentration by quantitative RT-PCR when the TYE-563 fluorescent transfection control<br>duplex (cat# SR30002) indicates that >90% of the cells have been transfected and the HPRT<br>positive control (cat# SR30003) provides 90% knockdown efficiency.  |
|                            | For non-conforming siRNA, requests for replacement product must be made within ninety<br>(90) days from the date of delivery of the siRNA kit. To arrange for a free replacement with<br>newly designed duplexes, please contact Technical Services at techsupport@origene.com.<br>Please provide your data indicating the transfection efficiency and measurement of gene<br>expression knockdown compared to the scrambled siRNA control (quantitative RT-PCR data<br>required). |
