

## Product datasheet for **TA140003**

### Peroxidase Conjugated Goat Anti-Rabbit IgG (Min Hu, Ms)

#### Product data:

Product Type:	Secondary Antibodies
Product Name:	Peroxidase Conjugated Goat Anti-Rabbit IgG (Min Hu, Ms)
Applications:	ELISA, WB
Recommended Dilution:	WB: 1:3,000-10,000; ELISA: 1:20,000-40,000
Reactivity:	Rabbit IgG
Host:	Goat
Immunogen:	Rabbit IgG, whole molecule
Isotype:	IgG
Formulation:	0.01M PBS (pH7.4)
Concentration:	N/A (lyophilized)
Purification:	This antibody was purified from antiserum by immunoaffinity chromatography which removes essentially all goat serum proteins, except the specific antibody for rabbit IgG.
Conjugation:	HRP
Storage:	Store lyophilized powders at 2-8°C. When ready to use, reconstitute with 0.5ml dH <sub>2</sub> O and centrifuge briefly. Product is stable at 2-8°C for 6 weeks as undiluted liquid. Prepare small aliquots to avoid repeated freezing and thawing. For extended storage after rehydration, aliquot and store at -20°C or below. Product will be stable for one year after rehydration. Alternatively, add an equal volume of glycerol (ACS grade or better) for a final concentration of 50% and store at -20°C. Please note that, adding glycerol reduces the stated protein concentration by half and the dilution ratio should be adjusted accordingly.
Note:	This peroxidase conjugated antibody is specific for rabbit IgG and shows no cross-reactivity other animal species IgG proteins.
