

Product datasheet for TA160056

pxo1_107 Rabbit Polyclonal Antibody

Product data:

Product Type: Primary Antibodies

Recommended Dilution: ELISA: 1 ug/mL

Reactivity: Bacteria
Host: Rabbit

Isotype: IgG

Clonality: Polyclonal

Immunogen: Anthrax lethal factor antibody was raised against a synthetic peptide corresponding to 16

amino acids in the middle of the Anthrax lethal factor protein.

Formulation: PBS containing 0.02% sodium azide.

Concentration: 1 mg/ml

Purification: Purified from mouse ascites fluids or tissue culture supernatant by affinity chromatography

(protein A/G)

Conjugation: Unconjugated

Storage: Store at -20°C as received.

Stability: Stable for 12 months from date of receipt.

Background: Anthrax Lethal Factor Antibody: Anthrax infection is initiated by the inhalation, ingestion, or

cutaneous contact with Bacillus anthracis endospores. B. anthracis produces three

polypeptides that comprise the anthrax toxin: protective antigen (PA), lethal factor (LF), and edema factor (EF). PA binds to two related proteins on the cell surface; these are termed tumor epithelial marker 8 (TEM8)/anthrax toxin receptor (ATR) and capillary morphogenesis protein 2 (CMG2), although it is still unclear which is physiologically relevant. Following PA binding to its receptor, PA is cleaved into two fragments by a furin-like protease. The bound fragment binds both LF and EF; the resulting complex is then endocytosed which allows the translocation of LF and EF into the cytoplasm. LF is the primary toxin of anthrax and functions as a highly specific protease that cleaves members of the mitogen-activated protein kinase kinase (MAPKK) family near their amino terminus, interfering with MAPK signaling and

inducing apoptosis.
