Background:	Dtnp1 may play a role in organelle biogenesis associated with melanosomes, platelet dense granules, and lysosomes. A similar protein in mouse is a component of a protein complex termed biogenesis of lysosome-related organelles complex 1 (BLOC-1), and binds to alpha- and beta-dystrobrevins, which are components of the dystrophin-associated protein complex (DPC). Mutations in this protein are associated with Hermansky-Pudlak syndrome type 7. This protein may also be associated with schizophrenia.
Synonyms:	BLOC1S8; DBND; HPS7; My031; SDY
Protein Families:	Druggable Genome

Western blot analysis of Dtnbp1 (arrow) using rabbit polyclonal Dysbindin (Dtnbp1) Antibody (C-term) (Cat.#TA300078).

Formalin-fixed and paraffin-embedded human hepatocarcinoma tissue reacted with Dtnbp1 Antibody (C-term) (Cat.#TA300078), which was peroxidase-conjugated to the secondary antibody, followed by DAB staining. This data demonstrates the use of this antibody for immunohistochemistry; clinical relevance has not been evaluated.
