**Background:** WNT proteins are extracellular signaling molecules involved in the control of embryonic

development. WIF1 is a secreted protein, which binds WNT proteins and inhibits their

activities. This protein contains a WNT inhibitory factor (WIF) domain and 5 epidermal growth factor (EGF)-like domains. It may be involved in mesoderm segmentation. This protein is

found to be present in fish, amphibia and mammals.

Synonyms: WIF-1

Western blot analysis of WIF1 (arrow) using rabbit polyclonal WIF1 Antibody (N-term) (Cat.#TA302106).

Formalin-fixed and paraffin-embedded human lung carcinoma tissue reacted with WIF1 (Human C-term) (Cat.#TA302106), which was peroxidase-conjugated to the secondary antibody, followed by DAB staining. This data demonstrates the use of this antibody for immunohistochemistry; clinical relevance has not been evaluated.
