Background:	WNT proteins are extracellular signaling molecules involved in the control of embryonic development. WIF1 is a secreted protein, which binds WNT proteins and inhibits their activities. This protein contains a WNT inhibitory factor (WIF) domain and 5 epidermal growth factor (EGF)-like domains. It may be involved in mesoderm segmentation. This protein is found to be present in fish, amphibia and mammals. WIF-1
Synonyms:	VVII - 1

Western blot analysis of WIF1 (arrow) using rabbit polyclonal WIF1 Antibody (N-term) (Cat.# [TA302106]).

Formalin-fixed and paraffin-embedded human lung carcinoma tissue reacted with WIF1 (Human C-term) (Cat.#[TA302106]), which was peroxidaseconjugated to the secondary antibody, followed by DAB staining. This data demonstrates the use of this antibody for immunohistochemistry; clinical relevance has not been evaluated.
