GRIGENE Cadherin 8 (CDH8) Rabbit Polyclonal Antibody – TA302196

Background:CDH8 is a type II classical cadherin from the cadherin superfamily, integral membrane
proteins that mediate calcium-dependent cell-cell adhesion. Mature cadherin proteins are
composed of a large N-terminal extracellular domain, a single membrane-spanning domain,
and a small, highly conserved C-terminal cytoplasmic domain. The extracellular domain
consists of 5 subdomains, each containing a cadherin motif, and appears to determine the
specificity of the protein's homophilic cell adhesion activity. Type II (atypical) cadherins are
defined based on their lack of a HAV cell adhesion recognition sequence specific to type I
cadherins. This particular cadherin is expressed in brain and is putatively involved in synaptic
adhesion, axon outgrowth and guidance.

Western blot analysis of lysates from SH-SY5Y, Y79 cell line (from left to right), using CDH8 Antibody (N-term) (Cat. #TA302196). TA302196 was diluted at 1:1000 at each lane. A goat antirabbit IgG H&L (HRP) at 1:5000 dilution was used as the secondary antibody. Lysates at 35ug per lane.

Formalin-fixed and paraffin-embedded human breast carcinoma tissue reacted with CDH8 antibody (N-term) (Cat.#TA302196), which was peroxidase-conjugated to the secondary antibody, followed by DAB staining. This data demonstrates the use of this antibody for immunohistochemistry; clinical relevance has not been evaluated.
