GRIGENE ABHD5 Goat Polyclonal Antibody – TA302449

Background:The protein encoded by this gene belongs to a large family of proteins defined by an
alpha/beta hydrolase fold, and contains three sequence motifs that correspond to a catalytic
triad found in the esterase/lipase/thioesterase subfamily. It differs from other members of
this subfamily in that its putative catalytic triad contains an asparagine instead of the serine
residue. Mutations in this gene have been associated with Chanarin-Dorfman syndrome, a
triglyceride storage disease with impaired long-chain fatty acid oxidation. [provided by
RefSeq]

Synonyms: CDS; CGI58; IECN2; NCIE2
