WEELS Goat Polyclonal Antibody - TA302697Background:The modification of proteins with ubiquitin is an important cellular mechanism for targeting
abnormal or short-lived proteins for degradation. Ubiquitination involves at least three
classes of enzymes: ubiquitin-activating enzymes (E1s), ubiquitin-conjugating enzymes (E2s)
and ubiquitin-protein ligases (E3s). This gene encodes a member of the E2 ubiquitin-
conjugating enzyme family. This enzyme is demonstrated to participate in the ubiquitination
of p53, c-Fos, and the NF-kB precursor p105 in vitro. Two alternatively spliced transcript
variants encoding distinct isoforms have been found for this gene. [provided by RefSeq]Synonyms:E2-F1; L-UBC; UBCH7; UbcM4
