Product datasheet for TA302816

PAX5 Goat Polyclonal Antibody

Product data:

Product Type:	Primary Antibodies
Applications:	WB
Recommended Dilution:	WB: 2-4µg/ml.
Reactivity:	Human (Expected from sequence similarity: Mouse)
Host:	Goat
lsotype:	lgG
Clonality:	Polyclonal
Immunogen:	Peptide with sequence DLEKNYPTPRTSR-C, from the N Terminus of the protein sequence according to NP_057953.
Formulation:	Supplied at 0.5 mg/ml in Tris saline, 0.02% sodium azide, pH7.3 with 0.5% bovine serum albumin.
Concentration:	lot specific
Purification:	Purified from goat serum by ammonium sulphate precipitation followed by antigen affinity chromatography using the immunizing peptide. Supplied at 0.5 mg/ml in Tris saline, 0.02% sodium azide, pH7.3 with 0.5% bovine serum albumin. Aliquot and store at -20°C. Minimize freezing and thawing.
Conjugation:	Unconjugated
Storage:	Store at -20°C as received.
Stability:	Stable for 12 months from date of receipt.
Gene Name:	paired box 5
Database Link:	<u>NP_057953</u> <u>Entrez Gene 18507 MouseEntrez Gene 5079 Human</u> <u>Q02548</u>

MAX5 Goat Polyclonal Antibody – TA302816

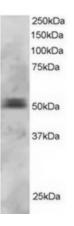

Background:This gene encodes a member of the paired box (PAX) family of transcription factors. The
central feature of this gene family is a novel, highly conserved DNA-binding motif, known as
the paired box. PAX proteins are important regulators in early development, and alterations
in the expression of their genes are thought to contribute to neoplastic transformation. This
gene encodes the B-cell lineage specific activator protein that is expressed at early, but not
late stages of B-cell differentiation. Its expression has also been detected in developing CNS
and testis and so the encoded protein may also play a role in neural development and
spermatogenesis. This gene is located at 9p13, which is involved in t(9;14)(p13;q32)
translocations recurring in small lymphocytic lymphomas of the plasmacytoid subtype, and in
derived large-cell lymphomas. This translocation brings the potent E-mu enhancer of the IgH
gene into close proximity of the PAX5 promoter, suggesting that the deregulation of
transcription of this gene contributes to the pathogenesis of these lymphomas. Alternatively
spliced transcript variants encoding different isoforms have been described but their
biological validity has not been determined. [provided by RefSeq]

Synonyms: ALL3; BSAP

Protein Families:

Transcription Factors

Product images:

TA302816 staining (3ug/ml) of U937 lysate (RIPA buffer, 30ug total protein per lane). Primary incubated for 1 hour. Detected by western blot using chemiluminescence.
