# Product datasheet for TA303037

### Vitamin D Receptor (VDR) Goat Polyclonal Antibody

#### **Product data:**

| Product Type:         | Primary Antibodies   |  |
|-----------------------|--|--|
| Applications:         | WB   |  |
| Recommended Dilution: | ELISA: 1:16,000. WB: 0.3-1.0µg/ml.   |  |
| Reactivity:           | Human, Mouse, Rat (Expected from sequence similarity: Dog)   |  |
| Host:                 | Goat   |  |
| lsotype:              | IgG  |  |
| Clonality:            | Polyclonal   |  |
| Immunogen:            | Peptide with sequence CGNQDYKYRVSD, from the internal region of the protein sequence according to NP_000367.1; NP_001017535.1.   |  |
| Formulation:          | Supplied at 0.5 mg/ml in Tris saline, 0.02% sodium azide, pH7.3 with 0.5% bovine serum albumin.  |  |
| Concentration:        | lot specific   |  |
| Purification:         | Purified from goat serum by ammonium sulphate precipitation followed by antigen affinity chromatography using the immunizing peptide. Supplied at 0.5 mg/ml in Tris saline, 0.02% sodium azide, pH7.3 with 0.5% bovine serum albumin. Aliquot and store at -20°C. Minimize freezing and thawing. |  |
| Conjugation:          | Unconjugated   |  |
| Storage:              | Store at -20°C as received.  |  |
| Stability:            | Stable for 12 months from date of receipt.   |  |
| Gene Name:            | vitamin D (1,25- dihydroxyvitamin D3) receptor   |  |

|  | Vitamin D Receptor (VDR) Goat Polyclonal Antibody – TA303037      |
|--|---|
| Background: This gene encodes the nuclear hormone receptor for vitamin D3. This receptor<br>as a receptor for the secondary bile acid lithocholic acid. The receptor belongs t<br>trans-acting transcriptional regulatory factors and shows sequence similarity to<br>and thyroid hormone receptors. Downstream targets of this nuclear hormone r<br>principally involved in mineral metabolism though the receptor regulates a vari<br>metabolic pathways, such as those involved in the immune response and cance<br>in this gene are associated with type II vitamin D-resistant rickets. A single nucle<br>polymorphism in the initiation codon results in an alternate translation start sit<br>codons downstream. Alternative splicing results in multiple transcript variants e<br>same protein. [provided by RefSeq] |   |
| Synonyms:  | NR1I1; PPP1R163   |
| Protein Families   | Druggable Genome, Nuclear Hormone Receptor, Transcription Factors |
