BAG5 Goat Polyclonal Antibody - TA305758

Background: The protein encoded by this gene is a member of the BAG1-related protein family. BAG1 is an

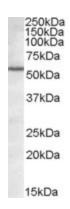

anti-apoptotic protein that functions through interactions with a variety of cell apoptosis and growth related proteins including BCL-2, Raf-protein kinase, steroid hormone receptors, growth factor receptors and members of the heat shock protein 70 kDa family. This protein contains a BAG domain near the C-terminus, which could bind and inhibit the chaperone activity of Hsc70/Hsp70. Three transcript variants encoding two different isoforms have been

found for this gene.

Synonyms: BAG-5

Protein Families: Druggable Genome
