# Product datasheet for TA306763

### **Amyloid Precursor Protein (APP) Rabbit Polyclonal Antibody**

### **Product data:**

| Product Type:         | Primary Antibodies   |
|-----------------------|--|
| Applications:         | IF, IHC, WB  |
| Recommended Dilution: | WB: 1 - 2 ug/mL, ICC: 2.5 ug/mL, IF: 20 ug/mL  |
| Reactivity:           | Human, Mouse, Rat  |
| Host:                 | Rabbit   |
| lsotype:              | lgG  |
| Clonality:            | Polyclonal   |
| Immunogen:            | APP antibody was raised against an 18 amino acid peptide near the amino terminus of human APP. |
| Formulation:          | PBS containing 0.02% sodium azide.   |
| Concentration:        | 1ug/ul   |
| Purification:         | Affinity chromatography purified via peptide column  |
| Conjugation:          | Unconjugated   |
| Storage:              | Store at -20°C as received.  |
| Stability:            | Stable for 12 months from date of receipt.   |
| Gene Name:            | amyloid beta precursor protein   |
| Database Link:        | <u>CAA30050</u><br><u>Entrez Gene 351 Human</u><br><u>P05067</u>                               |

|             | Amyloid Precursor Protein (APP) Rabbit Polyclonal Antibody – TA306763  |
|-------------|--|
| Background: | Accumulation of the amyloid-beta peptide (Abeta) in the cerebral cortex is a critical event in<br>the pathogenesis of Alzheimer's disease. The beta-amyloid protein precursor (APP) is cleaved<br>by one of two beta-secretases (BACE and BACE2), producing a soluble derivative of the<br>protein and a membrane anchored 99-amino acid carboxy-terminal fragment (C99). The C99<br>fragment serves as substrate for ?-secretase to generate the 4 kDa amyloid-beta peptide<br>(Abeta), which is deposited in the Alzheimer's disease patients' brains. Recently, Death<br>Receptor 6 (DR6) was found to interact with an amino-terminal fragment of the Beta-amyloid<br>protein (N-APP) in neurons, activating a caspase 6-dependent apoptotic event leading to<br>axonal degeneration and pruning during development, suggesting that these two proteins<br>are involved in neural development and may possibly play a role in Alzheimer's disease. |

Synonyms:

AAA; ABETA; ABPP; AD1; APPI; CTFgamma; CVAP; PN-II; PN2

## **Product images:**

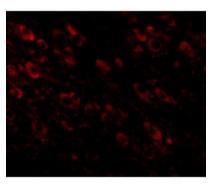

Western blot analysis of APP in mouse brain tissue lysate with APP antibody at (A) 1 and (B) 2 ug/ml.

Immunohistochemistry of APP in mouse brain tissue with APP antibody at 2.5 ug/ml.
