#### **Product images:**

Western blot of rat testes lysate showing specific immunolabeling of the ~46k EphrinB phosphorylated at Tyr331 (Control). The phosphospecificity of this labeling is shown in the second lane (lambda-phosphatase: î»-Ptase). The blot is identical to the control except that it was incubated in î»-Ptase (1200 units for 30 min) before being exposed to the Anti-Tyr331 EphrinB. The immunolabeling is completely eliminated by treatment with î»-Ptase.
