Progesterone Receptor (PGR) Mouse Monoclonal Antibody [Clone ID: 1154]

Product data:

Product Type: Primary Antibodies

Clone Name: 1154 Applications: WB

Recommended Dilution: WB: 1:1000, IHC: 1:1000

Reactivity: Human

Modifications: Phospho-specific

Host: Mouse Isotype: IgG1

Clonality: Monoclonal

Immunogen: Synthetic phospho-peptide corresponding to amino acid residues surrounding Ser190

conjugated to KLH

Formulation: 100 μl in 10 mM HEPES (pH 7.5), 150 mM NaCl, 100 μg per ml BSA and 50% glycerol.

Purification: Protein G purified

Conjugation: Unconjugated

Storage: Store at -20°C as received.

Stability: Stable for 12 months from date of receipt.

Predicted Protein Size: 90/120 kDa

Gene Name: progesterone receptor

Database Link: NP 000917

Entrez Gene 5241 Human

P06401

Background: This gene encodes a member of the steroid receptor superfamily. The encoded protein

mediates the physiological effects of progesterone, which plays a central role in reproductive events associated with the establishment and maintenance of pregnancy. This gene uses two distinct promotors and translation start sites in the first exon to produce two isoforms, A and B. The two isoforms are identical except for the additional 165 amino acids found in the N-terminus of isoform B and mediate their own response genes and physiologic effects with

little overlap. [provided by RefSeq]

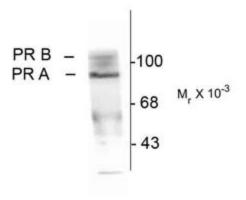

Synonyms: NR3C3; PR

Protein Families: Druggable Genome, Nuclear Hormone Receptor, Transcription Factors

Protein Pathways: Oocyte meiosis, Progesterone-mediated oocyte maturation

Product images:

Western blot of whole cell T47D lysate prepared from cells that had been inubated in the presence of the synthetic progestin agonist [R5020] (500 nM) showing specific immunolabeling of the ~90k PR-A isoform and the ~120 PR-B isoform of the progesterone receptor phosphorylated at Ser190. The immunolabeling is specifically blocked by the phosphopeptide used as the antigen (not shown).
