#### **Product images:**

Western blot of rat cortex lysate showing specific immunolabeling of the ~60k - ~62k synaptotagmin phosphorylated at Ser309 (Control). The phosphospecificity of this labeling is shown in the second lane (lambdaphosphatase: î»-Ptase). The blot is identical to the control except that it was incubated in î»-Ptase (1200 units for 30 min) before being exposed to the Ser309 synaptotagmin antibody. The immunolabeling is completely eliminated by treatment with î»-Ptase.
