| Product Type:         | Primary Antibodies   |
|-----------------------|--|
| Applications:         | WB   |
| Recommended Dilution: | ELISA: 1:5,000 - 1:25,000, WB: 1:500 - 1:2,000   |
| Reactivity:           | Human, Mouse, Rat, Dog   |
| Host:                 | Rabbit   |
| lsotype:              | lgG  |
| Clonality:            | Polyclonal   |
| Immunogen:            | This affinity purified antibody was prepared from whole rabbit serum produced by repeated immunizations with a phosphorylated synthetic peptide corresponding to the region of amino acids containing serine 206 of human SMAD1 protein. |
| Formulation:          | 0.02 M Potassium Phosphate, 0.15 M Sodium Chloride, pH 7.2   |
| Concentration:        | lot specific   |
| Conjugation:          | Unconjugated   |
| Storage:              | Store at -20°C as received.  |
| Stability:            | Stable for 12 months from date of receipt.   |
| Gene Name:            | SMAD family member 1   |
| Database Link:        | <u>NP_001003688</u><br><u>Entrez Gene 17125 MouseEntrez Gene 25671 RatEntrez Gene 475456 DogEntrez Gene 4086</u><br><u>Human</u><br><u>Q15797</u>  |
| Synonyms:             | BSP-1; BSP1; JV4-1; JV41; MADH1; MADR1   |

|                 | SMAD1 Rabbit Polyclonal Antibody – TA319240  |
|-----------------|--|
| Note:           | SMAD1 is also known Mothers Against Decapentaplegic homolog 1, Mothers against DPP<br>homolog 1, hSMAD-3, JV4-1, Transforming growth factor-Beta-Signaling Protein 1 or BSP1.<br>SMAD proteins are signal transducers and transcriptional modulators that mediate multiple<br>signaling pathways. SMAD1, as a transcriptional modulator, is activated by BMP (Bone<br>Morphogenetic Protein) type 1 receptor kinase (it is a receptor-regulated SMAD or R-SMAD).<br>BMPs are involved in a range of biological activities including cell growth, apoptosis,<br>morphogenesis, development and immune responses. SMAD proteins have been implicated<br>as downstream effectors of TGF beta/BMP signaling. In response to BMP ligands, SMAD1 can<br>be phosphorylated (other sites besides the most prominent of S206, are S187, S195, and<br>S214). S-206 is phosphorylated by ERK in response to mitogenic growth factors, or by<br>recombinant ERK in vitro; this can be tested by treating cells with EGF or in cancer cells where<br>Ras is activated. The phosphorylated form of this protein forms a complex with SMAD4,<br>which is important for its function in the transcription regulation. This protein is also a target<br>for SMAD-specific E3 ubiquitin ligases, such as SMURF1 and SMURF2, and undergoes<br>ubiquitination and proteasome-mediated degradation. |
| Protein Familie | <ul> <li>Cancer stem cells, Druggable Genome, ES Cell Differentiation/IPS, Stem cell relevant signaling</li> <li>JAK/STAT signaling pathway, Stem cell relevant signaling - TGFb/BMP signaling pathway,</li> <li>Transcription Factors</li> </ul>  |
| Protein Pathwa  | ys: TGF-beta signaling pathway   |

## **Product images:**

WB using Anti-SMAD1 pS206 antibody shows detection of endogenous phosphorylated SMAD1 in whole cell lysates from HEPG2 (lanes 1-4) derived cell lines treated with PBS, BMP2 (5ng/mL), EGF (1ng/mL), or NaCl for 1h at 37°C before harvest. Primary antibody was used at 1:500 and pre-incubated before reacting with blot as follows: top row - with PBS, middle row - with the immunizing phosphorylated peptide and bottom row - with control or non-phosphorylated peptide. HRP-conjugated-Rabbit IgG was 1:3,000.
