## Mesothelin (MSLN) Mouse Monoclonal Antibody [Clone ID: MB-G10]

**Product data:** 

**Product Type:** Primary Antibodies

Clone Name: MB-G10
Applications: IHC, WB

**Recommended Dilution:** ELISA: 1:10,000 - 1:50,000, WB: 1:1,000, IHC: 1:100

Reactivity: Human Host: Mouse

Clonality: Monoclonal

**Immunogen:** This antibody was produced in mice by repeated immunizations with a recombinant protein

corresponding to the extracellular domain of human mesothelin.

**Formulation:** 0.02 M Potassium Phosphate, 0.15 M Sodium Chloride, pH 7.2

Concentration: lot specific

Conjugation: Unconjugated

**Storage:** Store at -20°C as received.

**Stability:** Stable for 12 months from date of receipt.

Gene Name: mesothelin

Database Link: NP 001170826

Entrez Gene 10232 Human

Q13421

Synonyms: MPF; SMRP

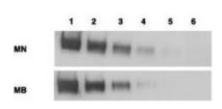

Note:

Anti Mesothelin Antibody recognizes Mesothelin that is a glycosyl-phosphatidylinositol-anchored glycoprotein present on the cell surface of various human solid tumors. The mesothelin (MSLN) gene encodes a 71-kDa precursor protein that is processed to a 40-kDa glycosylphosphatidylinositol-anchored protein that composes the mature portion and an NH2 terminal 31-kDa fragment called megakaryocyte-potentiating factor that is released from the cell. Mesothelin is a tumor differentiation antigen present at low levels on a restricted set of normal adult tissues, such as mesothelium, but aberrantly over expressed in mesotheliomas, ovarian, and pancreatic cancers. The biological functions of mesothelin remain elusive. A recent study showed that mesothelin binds to MUC16/CA125, and that this interaction mediates cell adhesion, suggesting that there may be an important role for MUC16/CA125 and mesothelin in the metastatic spread of ovarian cancer.

**Protein Families:** 

Druggable Genome, Secreted Protein, Transmembrane

## **Product images:**

Western blotting using anti-mesothelin antibodies to detect mesothelin-Fc at 100 ng (lane 1), 25 ng (lane 2), 6 ng (lane 3), 2 ng (lane 4) and 0.4 ng (lane 5). Lane 6 contains 50 ng of CDC25-Fc. Proteins were separated on 4-20% gradient gel by SDS-PAGE followed by transfer to PVDF membrane. Primary antibody was used at 1 ?g/ml followed by reaction with ALP goat anti-mouse IgG and BCIP/NBT substrate. Reprinted with permission fromClin.Cancer Res. 11 (16):5840-6.

Immunohistochemistry using anti-mesothelin antibodies to detect mesothelin in PEFF human tissue sections treated by antigen retrieval methods. Anti-mesothelin primary antibodies were used to label these sections as follows: C, MAb MB; and D, MAb MN. Reprinted with permission fromClin.Cancer Res. 11 (16):5840-6.
