

Product datasheet for **TA320470**

TBX21 Mouse Monoclonal Antibody [Clone ID: eBio4B10 (4B10, 4-B10)]

Product data:

Product Type:	Primary Antibodies
Clone Name:	eBio4B10 (4B10, 4-B10)
Applications:	WB
Recommended Dilution:	IHC, IP, WB
Reactivity:	Human, Mouse, Rhesus Monkey
Host:	Mouse
Clonality:	Monoclonal
Formulation:	Aqueous buffer, 0.09% sodium azide, may contain carrier protein/stabilizer
Concentration:	lot specific
Purification:	Affinity purified
Conjugation:	Unconjugated
Storage:	Store at -20°C as received.
Stability:	Stable for 12 months from date of receipt.
Gene Name:	T-box 21
Database Link:	NP_037483 Entrez Gene 57765 Mouse Entrez Gene 30009 Human Q9UL17

Background: The eBio4B10 monoclonal antibody reacts with mouse and human T-bet. T-bet is a Th1-specific T-box transcription factor critical to the development of the Th1 CD4+ T cell lineage. This is known based on the observations that T-Bet deficient mice have impaired Th1 cell development, and that ectopic expression of T-Bet results in development skewed to the Th1 lineage. T-Bet expression is induced by the Th1 cytokine IFN gamma, and T-Bet also regulates the expression of IFN gamma, likely, at least in part, through the modification of DNA accessibility and histone remodeling. In addition to IFN gamma, T-Bet is also known to regulate the expression of IL-12R beta and IL-2. Moreover, T-Bet plays a role in class-switch recombination in B-cells.

Synonyms: T-bet; T-PET; TBET; TBLYM

Protein Families: Druggable Genome, Transcription Factors

Product images:

CD4⁺ T cells were sorted from mouse spleen, activated with Anti-Mouse CD3 and Anti-Mouse CD28, followed by culture in Th1-polarizing conditions, and re-activation with PMA and Ionomycin. Lysates from control (left) or PMA and Ionomycin-re-activated (right) cells were probed with Anti-Human/Mouse T-bet Purified at 2 ug/mL, and revealed with Anti-Mouse IgG HRP.
