

Product datasheet for TA321062S

Factor XIIIa (F13A1) Rabbit Polyclonal Antibody

Product data:

Product Type: Primary Antibodies

Applications: IHC

Recommended Dilution: IHC: 25-100

Positive control: Human esophagus cancer Predicted cell location: Secreted, Cytoplasm

Reactivity: Human, Mouse

Host: Rabbit Isotype: IgG

Clonality: Polyclonal

Immunogen: Fusion protein corresponding to C terminal 250 amino acids of human coagulation factor XIII,

A1 polypeptide

Formulation: PBS pH7.3, 0.05% NaN3, 50% glycerol

Purification: Antigen affinity purification

Conjugation: Unconjugated

Storage: Store at -20°C as received.

Stability: Stable for 12 months from date of receipt.

Gene Name: coagulation factor XIII A chain

Database Link: NP 000120

Entrez Gene 74145 MouseEntrez Gene 2162 Human

Background:

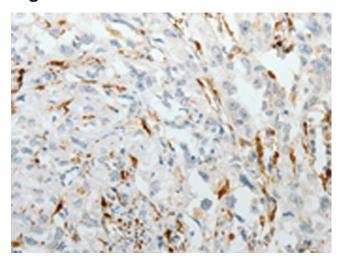

This gene encodes the coagulation factor XIII A subunit. Coagulation factor XIII is the last zymogen to become activated in the blood coagulation cascade. Plasma factor XIII is a heterotetramer composed of 2 A subunits and 2 B subunits. The A subunits have catalytic function; and the B subunits do not have enzymatic activity and may serve as plasma carrier molecules. Platelet factor XIII is comprised only of 2 A subunits; which are identical to those of plasma origin. Upon cleavage of the activation peptide by thrombin and in the presence of calcium ion; the plasma factor XIII dissociates its B subunits and yields the same active enzyme; factor XIIIa; as platelet factor XIII. This enzyme acts as a transglutaminase to catalyze the formation of gamma-glutamyl-epsilon-lysine crosslinking between fibrin molecules; thus stabilizing the fibrin clot.

Synonyms: F13A

Protein Families: Druggable Genome, Secreted Protein

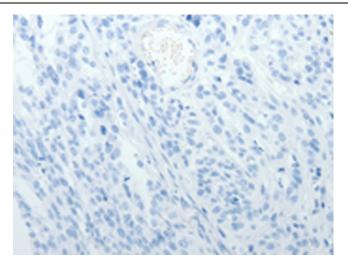

Protein Pathways: Complement and coagulation cascades
