GRIGENE CUL4A Rabbit Polyclonal Antibody – TA321260S

Background:CUL4A is the ubiquitin ligase component of a multimeric complex involved in the degradation
of DNA damage-response proteins.Core component of multiple cullin-RING-based E3
ubiquitin-protein ligase complexes which mediate the ubiquitination and subsequent
proteasomal degradation of target proteins. As a scaffold protein may contribute to catalysis
through positioning of the substrate and the ubiquitin-conjugating enzyme. The E3 ubiquitin-
protein ligase activity of the complex is dependent on the neddylation of the cullin subunit
and is inhibited by the association of the deneddylated cullin subunit with TIP120A/CAND1.
The functional specificity of the E3 ubiquitin-protein ligase complex depends on the variable
substrate recognition component. DCX(DET1-COP1) directs ubiquitination of JUN. DCX(DDB2)
directs ubiquitination of XPC. In association with RBX1; DDB1 and DDB2 is required for
histone H3 and histone H4 ubiquitination in response to ultraviolet and may be important for
subsequent DNA repair. DCX(DTL) plays a role in PCNA-dependent polyubiquitination of
CDT1 and MDM2-dependent ubiquitination of TP53 in response to radiation-induced DNA
damage and during DNA replication.
