Background:

The protein encoded by this gene belongs to the annexin family of calcium-dependent phospholipid binding proteins some of which have been implicated in membrane-related events along exocytotic and endocytotic pathways. Annexin 5 is a phospholipase A2 and protein kinase C inhibitory protein with calcium channel activity and a potential role in cellular signal transduction; inflammation; growth and differentiation. Annexin 5 has also been described as placental anticoagulant protein I; vascular anticoagulant-alpha; endonexin II; lipocortin V; placental protein 4 and anchorin CII. The gene spans 29 kb containing 13 exons; and encodes a single transcript of approximately 1.6 kb and a protein product with a molecular weight of about 35 kDa.
