Gene Name: cyclin E1

Database Link: NP 001229

Entrez Gene 898 Human

P24864

**Background:** The protein encoded by this gene belongs to the highly conserved cyclin family, whose

members are characterized by a dramatic periodicity in protein abundance through the cell

cycle. Cyclins function as regulators of CDK kinases. Different cyclins exhibit distinct

expression and degradation patterns which contribute to the temporal coordination of each mitotic event. This cyclin forms a complex with and functions as a regulatory subunit of

CDK2, whose activity is required for cell cycle G1/S transition.
